## How can Mediclinic Software App help my business?

### MEDICLINIC SOFTWARE IS YOUR COMPETITIVE, CUSTOMISABLE SOLUTION.

It does everything integrated into one, easy to use platform. BUT - If you need something *special* for *your* business, we will design for you. Saving you - time and money.

Not only do we have fully integrated, fully featured, customisable software that you can run on your Mobile, Tablet or MAC or PC, we also have an APP for you and your clients. Now you have a real choice.

- Patients will be able to download the MEDICLINIC SOFTWARE App  from the App stores and connect DIRECTLY WITH YOU at the clinic they are registered to. (Or if a NEW patient they will be asked to FIRST call the clinic they want to visit.)
-  YOU CAN HAVE YOUR OWN CUSTOMISED App with YOUR LOGO. Think of how easily clients can find you with a personalised Booking App? Your clients will download YOUR APP and will be able to register and book without calling you, saving time and staff resources.
- QR code on your website where clients can SCAN the QR code and connect.
- Download yours, or our App from your website

## **So, how does it work for you and Your Patients?**

You or your Patients go to your App Store. Download the Mediclinic Software App to your mobile device or Tablet. OR – a patient can visit your own website and download the unique QR code we give you.

Your patient scans the QR code and that takes them directly to your site to make an appointment with you. Then you just log in using the easy to use app either as a Practitioner or as a Patient.

From here we have helpful user guidance, where an existing patient is located by our system and connected to YOUR SITE.

**You do not need a website as we connect your patients to you.**

From there the patient can book again with existing services and clinics (you may have more than one location or multiple clinics or services). Your patient can then select the clinic if you have a few, the provider and the service as they may want to have a different service if you allow this.

EVERYTHING the patient sees is what you allow them to see. You allow these settings in Your SITE of Mediclinic Software - accessed when you sign up.

- **Clinic location**
- **Providers**
- **Treatment types**
- **Appointment Dates available**
- **No Client website required**
- **Change your language** – *German, French, Spanish, English, Dutch*

A patient can now book and check their bookings, download invoices when they need them, Cancel, Change or make New Appointments saving you Administration time.

**Patients** connect them to Google Maps so they can easily find their way, add to their Calendar and remind them of appointments for you.

**Providers** can add new patients, and control most functions needed to run a business on the go and when you are busy.

**IT IS THAT EASY. Smart technology to help you!**

If you have **YOUR OWN LOGO**, (a small monthly fee applies for app store maintenance of YOUR OWN LOGO APP.) We can connect new patients to you because new patients will download Your App and we connect them directly to you.

If you are using the Mediclinic Software APP and not your personalised APP we can only connect existing patients NOT new patients.

(As you can appreciate Mediclinic Software operates in many countries and has thousands of Providers, so we do not want to show a list of all providers when a New Patient books and has not connected with you already. They will be too confused scrolling through thousands of choices. Privacy is also a concern.)

### Premium
